Deep Water Horizon Incident

Report # 13

Current Situation:

- Four human exposure cases, all non-occupational, have been reported to the LPC in the past 24 hours.
- In exposure cases related to the spill the most common symptom reported to the LPC is throat irritation.
- Inhalation continues to be the most common route of exposure for spill related calls.
- Cases are being followed for outcome/duration.
- There have been no spill related information queries to the LPC in the past 24 hours.
- One general information call related to the spill was reported to the Mississippi Poison Center in the past 24 hours. No additional information or exposure calls have been reported to the Alabama, Florida, or Texas Poison Centers in the last 24 hours.
- The LPC is reporting cases to the Louisiana Department of Health and Hospitals as they are received.
